

## Project Design Phase

### Problem – Solution Fit Template

Date	28 June 2025
Team ID	LTVIP2025TMID40870
Project Name	TrafficTelligence: Advanced Traffic Volume Estimation with Machine Learning.
Maximum Marks	2 Marks

#### Problem – Solution Fit Template:

The core problem faced by commuters and traffic authorities is the unpredictability of traffic, which leads to delays, frustration, and inefficient road usage. Traditional methods are often reactive and lack predictive capabilities. *TrafficTelligence* addresses this issue by providing a machine learning-powered web application that predicts traffic volume based on time and weather inputs. This solution fits naturally into user behavior, requires no expensive infrastructure, and offers data-driven insights. By aligning with user needs and daily routines, it effectively solves a real and recurring problem with a practical and scalable approach.

#### Purpose:

- ☐ **Solve real-world traffic problems** by providing predictive insights into vehicle volume using machine learning models tailored to user behavior and data patterns.
- ☐ **Enhance user adoption and satisfaction** by integrating a simple, accessible web interface that aligns with daily commuter routines and decision-making processes.
- ☐ **Improve communication and planning** by delivering accurate traffic predictions that reduce uncertainty and help users make informed travel choices.
- ☐ **Build trust and engagement** by solving frequently encountered traffic issues through a reliable, data-driven system that minimizes delays and stress.
- ☐ **Understand and improve existing infrastructure** by analyzing historical traffic and weather data to support better road management strategies and smarter urban mobility solutions

#### Template:

### TrafficTelligence: Advanced Traffic Volume Estimation with Machine learning Learning

<b>1. CUSTOMER SEGMENT(S)</b> Organizations facing problem related traffic volume estimation	<b>2. JOBS-TO-BE-DONE / PROBLEMS</b> <span style="background-color: #f8d7da; padding: 2px;">2</span> What challenge current traffic volume-estimation does it pose customers? (e.g. manual traffic counts, limited data)	<b>3. AVAILABLE SOLUTIONS</b> What solution(s) or approaches can be used to address this problem e.g. manual traffic
<b>4. CUSTOMER CONSTRAINTS</b> <span style="background-color: #d1ecf1; padding: 2px;">CC</span> Factors preventing customers from addressing the problem (e.g. manual data)	<b>5. PROBLEM ROOT CAUSE</b> <span style="background-color: #fff3cd; padding: 2px;">RC</span> What makes the problem complex or difficult to solve? (e.g. multiple traffic patterns, diverse geographical areas)	<b>6. BEHAVIOUR</b> What makes it difficult to solve address this problem and gain customer buy-in (e.g. analyzing sensors)
<b>7. TRIGGERS</b> <span style="background-color: #d1ecf1; padding: 2px;">TR</span> How does or circumstances, many that may trigger customers to seek a better traffic volume estimation? (e.g. new regulatory requirements/ increased costs associated with congestion)	<b>8. YOUR SOLUTION</b> <span style="background-color: #d1ecf1; padding: 2px;">SL</span> How does your machine learning solution better address your current solution (e.g. enhancing traffic volumes based on historical data and other features, enabling real-time predictions)	<b>9. CHANNELS &amp; BEHAVIOUR</b> <span style="background-color: #d1ecf1; padding: 2px;">EM</span> How do customers use TrafficTelligence is delivered to customers? (e.g. website)
<b>10. TRIGGERS</b> <span style="background-color: #d1ecf1; padding: 2px;">EM</span> How can customers use TrafficTelligence to better address their problem? (e.g. free trials and demonstrations)		<b>10. OPT-IN</b> <span style="background-color: #d1ecf1; padding: 2px;">IO</span> How do customers use TrafficTelligence if or how converted into free and paying customers? (Free trials and demonstrations easily)
